

Super Strong Magnet Ingestion Advice Leaflet

Recently, a different type of magnet (also known as Neo magnet, Bucky balls, Magnet balls or Super Strong Rare-Earth Magnets) has gone on sale. They are most often sold as 'adult desk toys, stress relievers or brain development toys' and it is not legal to sell them to children less than 14 years of age.

They are between five and ten times stronger than traditional magnets and are sometimes called "super strong" or "powerful magnets". They can be in a variety of shapes, most often balls or discs.

Today your child has been discharged after swallowing a magnet. Even though the magnet has not passed through them yet, it is OK to take your child home.

After going home, your child will need a follow up X-ray 6-12 hours later and you should have been given a time to reattend the Emergency Department. This follow up X-ray is extremely important so doctors can make sure the magnet is moving normally through your child's bowels.

Until your child has had their repeat X-ray, remove any other external magnetic objects nearby and avoid clothes with metallic buttons or belts with buckle.

There is no need to examine your child's faeces to find the swallowed object.

If a single magnet is ingested, it can be expected to be passed spontaneously if the magnet is not too large.

Very rarely, the object can become stuck in the stomach or intestines. Take your child to the Emergency Department IMMEDIATELY if they have

- Concerns of further magnet or foreign object being swallowed
- Vomiting
- Abdominal (tummy) pain
- Blood in their vomit or poo
- A fever
- You have concerns about a change in your child's eating patterns e.g. refusing food or fluids
